Healthy Ageing: The Relationship Between Brain and Cognition

Annual Psychology Lecture 2013 by Professor Lorraine K. Tyler, University of Cambridge

Thursday 7 March 2013, 5–6pm

Room 065, Lecture Theatre, Queen Anne Court, Greenwich Campus SE10 9LS.

The lecture will be followed by refreshments in the Council Room (room 063).

Lorraine K. Tyler is Professor of Cognitive Neuroscience at the University of Cambridge where she heads the Centre for Speech, Language and the Brain, an interdisciplinary research group which combines neuroimaging, neuropsychological and behavioural methods to reveal how the human brain is organised to support language, perception and meaning. She also leads the Cambridge Centre for Ageing and Neuroscience (CamCan), a large-scale collaborative research project studying how age-related changes in brain structure and function relate to patterns of preserved and declining cognitive function.

Professor Tyler gained her PhD from the University of Chicago in the Department of Behavioural Sciences. Originally trained as an experimental psycholinguist, her longstanding interest in language and the brain initially focused on studies with brain-damaged patients and, since 1998, has involved extensive research using neuroimaging methods (fMRI and MEG).

She has worked at the Max Plank Institute for Psycholinguistics in Nijmegen and is a Fellow of the British Academy, the Academia Europaea, the British Psychological Society and the American Psychological Society. She is also managing editor of Language and Cognitive Processes and Cognitive Neuroscience of Language.

If you wish to attend, please contact Rebecca Obasanjo. Tel: 020 8331 8089. E-mail: r.obasanjo@gre.ac.uk.
Alternatively, please detach the slip below and return it to: Rebecca Obasanjo, School of Health & Social Care, room 211, Mary Seacole Building, Southwood Site, Avery Hill Road, Eltham, London SE9 2UG.
